Engineering

At Insitu we make it a habit to hire the best and the brightest engineers available. Thanks to their efforts we are able to constantly innovate upgrades, revisions, and improvements to our systems. Our software engineers work to provide greater reliability, performance, and ease of operation. Our mechanical and design engineers, model, prototype, and test many components and systems, including our patented SkyHook, cutting edge engine mount, translucent nose dome, and unique Dual Bay payload bay design. Our propulsion systems specialists and manufacturing and product engineers have brought us the heavy fuel engine, and noise reducing muffler, to name a few.

All together, our engineers in every department are constantly responsible

for hundreds of innovations, large and small.

At Insitu, we are making ideas soar, and we know that it is our engineers and their teamwork, agility, intelligence, commitment, experience, enthusiasm, and creativity, that make this possible. For more information about what our engineers can do for you, please contact Dave Anderson at dave.anderson@insitu.com.
